

COMPETENT IN **DIALYSIS** **TREATMENT**

SINCE 2005, the National Kidney Foundation Malaysia has been conducting the post-basic haemodialysis nursing course to develop the necessary skills, knowledge and attitude required for staff nurses and assistant medical officers involved in haemodialysis.

Recently, several nurses and medical personnel from NKF and personnel from other NGOs and from the private sector underwent the course conducted by NKF. These para-medical personnel can now carry out dialysis treatment as part of a safe, effective and caring team.
